

A pair of hands is shown holding a small, rectangular gift box wrapped in brown paper. The box is tied with a red ribbon featuring a white polka-dot pattern, forming a bow. The hands are positioned on either side of the box, with fingers gently gripping it. The background is blurred, showing what appears to be a wooden railing or staircase.

07 Task Scenario

Introduction

禮悟 = 透過禮物，理悟彼此

An invisible wall exists between digital natives and the older generations.

Even when we wish to show our care,
the hectic pace of modern life and our naturally reserved personalities
cause these emotions to drift apart in silence.

Through EverPresent,
we hope to transform the act of "gift-giving" into a warm icebreaker,
opening up a channel brings us closer together.

Our Goals

Memory Bridge

Utilizing AI to translate abstract life stories, enabling two generations to create emotional resonance through physical gifts.

Cultural Preservation

Digitalizing fragmented family memories and transforming them into warm, meaningful cultural assets.

Deep Experience

Upgrading from simple "e-commerce referrals" to "emotional narratives," creating a memory-sharing space exclusively for families.

Persona

Siao-shun(David), Wu
literal-minded person

Age	Occupation	Location
27 Years Old	Backend Engineer	Taipei, Taiwan

Pragmatic

Logic-driven

Reserved

Go-getter

Brands

Personality

Introvert Extrovert

Introverted at first, but highly talkative with close friends and family.

Analytical Creative

Hyper-rational; prioritizes logic and efficiency in all decision-making.

“ I want my gift to be
more than just a transaction;
I want it to tell a story
I don't know how to phrase.”

Goals

- **Beyond Generic:** Outgrow basic supplements with a meaningful gift under NTD6,000.
- **Data-Driven Selection:** Use an "algorithmic" tool to match Grandpa's history with precision.
- **Heartfelt Surprise:** Deliver a deeply moving gift for Grandpa's 80th birthday.

Pain
Points

- **Translation Gap:** Struggling to turn abstract memories into tangible gifts.
- **Market Mediocrity:** Tired of product-oriented platforms lacking cultural depth.
- **Selection Anxiety:** Uncertain if a generic choice will ever feel "right".

Mei-Ling (Lily), Chen

the thoughtful connector

Empathetic

Spontaneous

Creative

Warm

Brands

ZARA

Personality

Introvert

Extrovert

Socially energized; thrives in small close-knit groups.

Analytical

Creative

Follows intuition and emotion over logic when choosing gifts.

" I don't just want to give something pretty — I want her to feel like I really know her. "

Goals

- **Beyond Generic:** Find something that truly reflects her friend's personality, not just a trend.
- **Story-Driven:** Wants the gift to carry a shared memory or inside joke.
- **Budget-Friendly:** Keep it meaningful yet under NTD 1,500.

Pain Points

- **Decision Fatigue:** Too many options on platforms like Pinkoi overwhelm her.
- **Fear of Missing:** Afraid the gift won't feel personal enough.
- **Time Pressure:** Busy student schedule leaves little time to research.

Age
20
Years Old

Occupation
University
Student

Location
Taichung,
Taiwan

Shu-Hua (Grace), Lin

the nostalgic gift-giver

Advanced

Caring

Pateient

Decisive

Brands

Personality

Introvert

Extrovert

Prefers deep one-on-one conversation over large gatherings.

Analytical

Creative

Purely emotion-driven; meaning and sentiment always come first.

"I want to give her more than just a present; I want to give her the memories of the time we've spent together."

Goals

- **Heartfelt Value:** Convey 40 years of friendship through a tangible, meaningful gift.
- **Simple Journey:** Needs an easy process with no complicated tech or English.
- **Cultural Fit:** Prefers gifts tied to Taiwanese traditions and shared memories.

Pain Points

- **Tech Barrier:** Unfamiliar with online shopping; needs guided, simple steps.
- **Afraid of Cliches:** Worried about giving the usual supplement or candle set.
- **Memory Gap:** Struggles to put 40 years of memories into words for AI.

Age	Occupation	Location
65 Years Old	Rich Boss	Tainan, Taiwan

Interview & CI Report

Phase1

User Interview Scenario 1

easy.gift.ai

Scenario 1 Setting: Grandpa's 70th birthday is coming up. You want to use AI to recommend an emotional gift within a budget of 6,000 TWD that can evoke memories of Changhua's Fangyuan sea bull culture and fishing village life.

Understanding User Needs

Q1. When you first see this scenario, would you intuitively want to input "a story" or "a few tags/keywords"? Why?

Interface Understandability

Q1. When you first saw this page, what did you think this website was for?
Q2. Are there any tags that didn't allow you to understand their function at first glance? e.g., Blog, Gift Ideas

Recommendation Process & Interaction Experience

Q1. Do you already have a gift idea? Do you prefer AI to provide specific options or recommend?
Q2. Which steps made you feel uncertain, or lack trust?
Q3. Do you think text-based recommendations are enough to convey the gift's value? Or need images to improve understanding and purchase intent?

Key Findings

情境一 CI Report

1

Basic Conditions Cannot Be Wrong

Recommendations must match age, budget, availability, and scenario; otherwise, users will quickly lose trust.

2

Unclear Homepage Task & Naming

After entering the site, users judge the website's purpose, field functions, and navigation tags first.

3

Start with the Person, Not the Product

Users think about who grandpa is, what he likes, and what memories he has first, rather than directly searching for product names.

4

Stories Forced into Keywords

The platform leans toward keyword search, forcing users to compress full scenarios into fragmented .

5

No Next Step After Failure

When a search fails or results do not match, users can only change keywords, or budget on their own.

6

Lack of "AI Feel"

AI Perception

If the system does not understand the story, ask follow-up questions about needs, or explain reasons, users feel it is just a regular search.

Feedback

1

Change Keyword Search to Story-based Input Guidance

The platform should provide a story-based input box, allowing users to describe the gift recipient, relationship, memories, and budget.

2

Add AI Follow-up and Requirement Deconstruction Process

Users expect the AI to help clarify their needs.
AI can ask a few follow-up questions before recommending, helping users organize their needs step by step.

3

Externalize AI's Understanding Results

Before recommending, display "I understand your needs as...", so users can confirm or modify it, enhancing their sense of control.

4

Strengthen Remedy Mechanisms for Search Failures

When no suitable results are found, the system should provide clear feedback and alternative directions.

Feedback

5

Ensure Hard Conditions like Budget and Recipient are Correct

Recommendation results should clearly label the price and reasons for matching.

6

Add Images and Specific Product Information

Recommendation results should be paired with product images, prices, sources, purchase links, and brief emotional recommendation reasons, allowing users to understand both the gift.

Affinity Diagram

User Interview Scenario 2

GiftU

Scenario 2 Setting: Grandpa's 75th birthday is approaching. You want to use GiftU to select a birthday gift that can evoke memories of his Tainan hometown and life experiences, while carrying cultural and emotional value.

Website Navigation and Gift Search

- Q1. After entering the homepage, which section will you notice first? Where will you start looking for Grandpa's gift?
- Q2. Did the website's classification, search, or filtering features help you find "gifts with memories"?
- Q3. Which tags, categories, or feature names made you feel confused?
- Q4. Was the process of finding gifts smooth? Do you feel that any search or filtering tools are missing?

Product Information and Emotional Value Judgment

- Q1. Is important information on the product page, such as place of origin, ingredients, and expiration date, easy to find?
- Q2. From where would you judge whether this gift has a "sense of ritual"?
- Q3. What was the key reason you finally chose this gift? Was it the appearance, function, or the sense of memory it brought?

Key Findings

情境二 CI Report

1

Classify first, search later

When they don't have a clear product idea, users tend to browse categories first, rather than typing keywords to search.

2

Images bring inspiration

Users prefer to gain gift inspiration through product images and visual browsing.

3

Classification is not focused enough

Products in the existing senior category are too cluttered, lacking entry points like "Traditional Flavor" or "Traditional Culture" that better fit the task scenario

4

Cross-filtering is unavailable

Users need to consider the recipient, festival, price, and delivery time simultaneously, but the website doesn't support multi-criteria filtering.

5

Insufficient key information

- The lack of information such as product expiration date and storage instructions reduces user judgment and trust.
- Gifting services are only discovered at the checkout stage, preventing users from taking them into consideration.

Feedback

1

Establish contextual classification entry points

Add subcategories like "Nostalgic Gifts" under the "Seniors" category, allowing users to start from emotional and cultural contexts, rather than slowly browsing through product categories alone.

2

Introduce multi-criteria cross-filtering

Add filter criteria that can be checked at the same time, such as "Price Range" and "Fast Delivery," so that users can quickly focus on products that meet the task requirements.

3

Strengthen the visual hierarchy of classification and filtering

Present important categories and filtering features in front blocks or tags, paired with brief text descriptions, so that users can understand the available browsing methods as soon as they enter the page.

4

Strengthen the provision of key information

Establish a fixed "Product Information" section to clearly list the key information, thereby enhancing product credibility. Allowing users to incorporate gifting services into their decision-making when comparing products.

Affinity Diagram

Scenario 2

情境：幫 75 歲台南阿公挑選具「回憶感」的生日禮物（預算內、時效急）

採訪者編號：#U01

1. 導航與介面

- 無法同時選取「對象（長輩）」與「節慶（生日/母親節）」，必須在不同頁面間切換，增加操作路徑與時間成本。
- 使用者傾向透過「圖片瀏覽」來觸發靈感，而非直接使用搜尋功能（因為內心尚無具體產品形象）。

2. 操作流程困惑

- 「最新商品」未能滿足需求，使用者必須自行切換至「熱銷商品」標籤才找到目標，顯示首頁推薦準確度有待提升。
- 結帳時才發現各產品的「卡片/客製化」服務權限不一（例如鳳梨酥無服務、烏魚子有服務），且資訊未在商品頁前置標註。
- 使用者對於加值服務是由「平台」還是「廠商」提供感到困惑，缺乏統一的說明。

3. 干擾預約與決策（商品資訊）

- 商品頁雖有產地成分，但缺乏食品核心資訊（如：食用期限、保存溫度是常溫或冷藏），造成決策遲疑。
- 建議商品列表應標註屬性（如：本土、傳統、老字號），能幫助使用者更快篩選出符合情境（有回憶感）的禮物。

4. 系統回饋與信任

- 雖有顯示預計到貨日，但缺乏「物流環節時間軸」（如：出貨日、配送中預期點），在有嚴格時效要求（生日）時，信任感前嫌不足。

情境：幫 75 歲台南阿公挑選具「回憶感」的生日禮物（預算內、時效急）

採訪者編號：#U03

1. 導航與介面

- 使用者預期看到「文化、古早味、經典」等字眼，但現有分類僅有「長輩、生日」，缺乏與「回憶/文化」直接掛鉤的入口。
- 使用者因內心無具體產品概念（關鍵字），完全不考慮使用搜尋功能。
- 在找不到文化類別後，被迫轉向「用途/對象」分類，雖有找到靈感，但屬於「退而求其次」的導航路徑。

2. 操作流程困惑

- 使用者發現「價格篩選」與「快速到貨」兩個分類無法同時選取，只能在價格分頁中用肉眼尋找細小的「速」圖示，效率極低。
- 商品列表內的標籤（最新、熱銷、特價）圖示設計太小，使用者滑過大半頁面後才察覺其存在。
- 進入長輩專區後，商品種類過於混雜，缺乏在二級分頁中進一步「再分類」的功能（例如：長輩區內的食物、長輩區內的健康）。

3. 商品資訊與決策

- 商品頁偏重「品牌介紹」，缺乏單項產品的具體細節（如：明確產地證明、生產日期）。使用者必須靠「推測」來判定是否為台灣茶。
- 「客戶的聲音」並非對應當前單一商品，而是混雜其他評價，導致使用者產生「假假」的負面感受，損害品牌信任。

4. 系統回饋與穩定性

- 超額取貨的「選擇門市」彈窗失效（呈現空白），強迫使用者改變配送習慣，這是導致流失的高風險點。
- 不喜歡「購買必辦會員」的設計，增加操作負擔。

資訊架構與尋找

Sketch & Wireframe

Phase1

Summary

Core Design Concept: Through AI conversational recommendations, contextual classification, gifting add-on service tags, and cross-platform referral mechanisms, assist users in moving step-by-step from "not knowing what to give" to "finding a suitable and purchasable gift".

Focus on elder gifting& nostalgic scenarios

Allow users to find gifts starting from "who to give to" and "what memories".

Designs navigation tailored for elder gifting scenarios, helping users quickly connect to the recipient's life background and emotional needs.

Strengthen gift-exclusive product information

Allow users to quickly judge whether a product is suitable.

Product pages should include key gift-related and quality information to help users judge suitability with confidence.

AI keyword& conversational recommendations

Let AI help users clarify their needs, rather than only requiring users to think of keywords themselves.

AI helps users expand gift ideas from background keywords and refine recommendations through follow-up questions about the recipient's memories, preferences, and context.

Cross-platform referrals& favorite comparisons

Allow recommendation results to be saved, compared.

External e-commerce links help users complete purchases, while collection and comparison features support final decisions based on price, appearance, emotional value, and convenience.

Sketch

Wireframe

Users' Feedback

1

Clearer Labels

Some bottom navigation labels were not clear, and users had to click them to understand their functions.

2

Mixed Navigation

Gift-related and recipient-related functions were placed together in the navigation, which was confusing.

3

Unclear Fields

Fields such as Gender and Location did not clearly explain why they were needed or how they would affect recommendations.

4

Clearer Profile

The Profile section should have a clearer title and include recipient details such as preferences, interests, or background.

5

Better History Filters

History records could include filters based on recipient attributes (age or gender) to support future gift decisions.

6

Clear AI Value

The app should clearly show what makes it different from general AI tools like ChatGPT or Gemini.

7

Simpler Design

Some users felt the design was slightly complex, so the feature purpose and user flow could be simplified.

8

Broader Recipients

The app currently focuses mainly on older adults, but future versions could support more types of gift recipients.

Hi-fi version

Interview & CI Report

Phase 2

User Interview

Scenario Setting: Think of a friend whose birthday is coming up. You want to send them a gift that represents your friendship memories or is suitable for them.

A. Preamble

- 1 Do you still remember what feature impressed you the most when you experienced the first version?
- 2 Which step made you feel a bit stuck last time, or left you not knowing what to do?

B Core Testing Matrix

Positioning Verification

- Q1. Is the recommendation result a "random bestseller" or "tailor-made"? From where did you feel it?
- Q2. If the gift is not suitable, where would you click to adjust it? What do you expect the system to respond?
- Q3. After clicking the confirmation button, do you expect it to be "payment and checkout" or "generating a gift story"?

Process Clarity

- Q1. Does the QA guidance make it easier to recall what story to input?
- Q2. Does the current presentation help you understand each step better?
- Q3. Is the amount of information on the page just right or too crowded?

Navigation Bar Identifiability

- Q1. If you want to find the past record , which icon would you instinctively click?
- Q2. Between the first version vs the second version of the middle button, which one makes you understand the core purpose better?

Key Findings

1

Unclear Naming

Nav bar naming leaves users unable to understand the function immediately. "Complete Purchase" causes users misunderstand.

2

Chatbot Cold Start Dilemma

Don't know what story to input; lack of suggested chips for guidance.

3

Process Lacks a Sense of Progress

Users do not know how many questions are left, when the recommendation will be generated, or if it autosaves.

4

Input Block Separation

Independent blocks for audio recording, photos, and videos do not match the usage habits.

5

Don't Rely Only on AI

Users don't want to rely only on AI, hope to browse and reference other people's gift-giving cases.

6

Page Information Overload

Put too much information on every page; cannot find the next step.

7

Recommendation Results Jump Pages

When recommendations do not meet expectations, users have to go back and re-enter.

Feedback

1

Integrate recommendations into the dialog box

Display recommendation results on the same chat page, retaining continuous conversation capabilities, allowing direct adjustment using natural language ("not handmade types", "see more similar styles").

2

Renaming

Memory → My Records, Archive → Gift History, Gift → Gift Recommendations; pair them with more intuitive icons. Complete Gift Selection / Create Gift Solution / Generate Gift Card; avoid e-commerce terms like Purchase, Buy, etc.

3

AI Process Progress Guidance

Display collection progress (✓ Common Memories ✓ Other Party's Interests ☐ Recent Needs), auto-save prompts, and an incomplete continuation mechanism.

4

Unified Design of Dialogue Interface

Change to attaching functional buttons next to the input box    + [Type a message...]

Feedback

5

Chatbot Suggested Chips

Add suggested chips for guidance: Meeting for the first time · Most memorable trip · Things overcome together · Other party's favorite thing

6

Gift Inspiration Wall

Add a gift inspiration wall: search for similar gift cases (search by gift recipient) + popular gift stories.

7

Page Information Volume Optimization

One screen focuses on one primary task, strengthen the primary and secondary information hierarchy, and reduce the number of cards on the same page.

Persistent Feedback Box

Task Scenario

Task Scenario -1

Scenario

With Mother's Day just around the corner, you want to prepare a heartwarming surprise for Grandma Mary. You decide to start by setting up a new album for her on the EverPresent platform to invite family members to co-edit. With the help of AI, you aim to pick the most touching memory gift for her within a limited budget.

母親節快到了，你想為 Mary 奶奶準備一份有溫度的驚喜。你決定在 EverPresent 平台上先幫奶奶開設新相簿，邀請家庭成員共同編輯，並透過 AI 的協助，在有限的預算內挑選一份最觸動心弦的記憶禮物送給她。

Tasks

- 1 Create a new album for Grandma Mary under the Memories feature, then copy the QR code to share with other relatives.
- 2 Open the AI Chatbot feature, engage in a conversation with the AI, and set the gift budget to \$150.
- 3 Browse through the results recommended based on your conversation, select a gift and successfully send it out.

- 1 在平台的 Memories 功能中，為 Mary 奶奶新增一個相簿，並複製 QRcode 傳給其他親戚朋友
- 2 開啟 AI Chatbot 功能，與 AI 對話，並將禮物的預算設定為 150 元
- 3 瀏覽 AI 根據對話推薦的成果，選擇最合適的禮物並成功送出

Task Scenario -2

Scenario

Grandpa Thomas's 80th birthday is coming up. To celebrate, the family is having hotpot for dinner tonight because it's his absolute favorite. However, you are completely stuck on what birthday gift to pick. You decide to use EverPresent to log his love for hotpot and let the AI find the perfect surprise.

爺爺的 80 歲生日快到了。為了慶祝，今晚全家聚餐決定吃火鍋（他的最愛）。然而，你現在完全不知道該挑選什麼生日禮物。於是，你決定先利用 EverPresent 多記錄他對火鍋的喜好，並讓 AI 幫你找到完美的禮物。

Tasks

1 Enter the platform and log Grandpa's preference for "Hotpot" .

2 Go to "Suggestion" find the AI's gift suggestions based on memory, and send it to Grandpa.

3 Navigate to your "Profile" to check the gift's delivery status.

1 在平台的 Memories 功能中，記錄爺爺喜歡「火鍋」

2 在 Suggestion 中，找到 AI 根據記憶推薦的禮物並成功送出爺爺

3 切換至「Profile」查詢剛剛送出的禮物紀錄與狀態
